## Quality Cable Management Solutions For Cabinets

Looking to add equipment to your data or networking cabinet without the need to rack-mount the products?

The redesigned LMS Data **CABSHELF-FE-250** is a feature-rich 19-inch rack-mount shelf that exceeds performance criteria when compared with other lesser vendor solutions.

Using quality Steel manufacturing, the LMS Data CABSHELF-FE-250 can accept a load of around 25Kg (approx.), so its ideal for active equipment including UPS, CCTV, A/V and even small-scale servers or storage devices.

Improvement to venting includes the provision of more slots which help reduce heat build-up within the cabinet, especially considering the lack of venting on wall enclosures, so heat, produced by active devices is easily dispersed by convection.

## specifications:

### 1U, Quality Rack-mounted Steel Shelf

High-Density Steel Manufactured with a load capacity of 25Kg (approx.) , ideal UPS, Servers, Networking and A/V

**Improved Venting Characteristics due to slotted design for reduced heat build-up within the enclosure**

Black, powder-coated (RAL9005) finish

**Dimensions: 483(W) x 250(D) x 44(H) mm**

Easy-to-fit design for almost all types of Enclosures and Cabinets

enclosures - power distribution -

**Eco**  
**NetCab**
