Date:

23 Aug 2019

Product Category:

8-bit Microcontrollers

Affected CPNs:**Notification subject:**

Data Sheet - ATmega808/1608/3208/4808 - 32-pin Data Sheet Document Revision

Notification text:

SYST-21QZKJ357

Microchip has released a new Product Documents for the ATmega808/1608/3208/4808 - 32-pin Data Sheet of devices. If you are using one of these devices please read the document located at [ATmega808/1608/3208/4808 - 32-pin Data Sheet](#).

Notification Status: Final

Description of Change:

- 1) Entire Document: Editorial Updates.
- 2) Features: Added industrial temperature range -40degC to +85degC
- 3) Pinout: Added note about QFN center pad attachment
- 4) Ordering Information: a) Added table of available product numbers b) Updated Product Information System figure
- 5) Package Drawings: Updated TQFP package drawing

Impacts to Data Sheet: None

Reason for Change: To Improve Manufacturability

Change Implementation Status: Complete

Date Document Changes Effective: 23 Aug 2019

NOTE: Please be advised that this is a change to the document only the product has not been changed.

Markings to Distinguish Revised from Unrevised Devices: N/A

ATmega808/1608/3208/4808 – 32-Pin

32-Pin Data Sheet – megaAVR® 0-series

Introduction

The ATmega808/1608/3208/4808 microcontrollers of the megaAVR® 0-series are using the AVR® processor with hardware multiplier, running at up to 20 MHz, with a wide range of Flash sizes up to 48 KB, up to 6 KB of SRAM, and 256 bytes of EEPROM in 28-, 32-, 40-, or 48-pin package. The series uses the latest technologies from Microchip with a flexible and low-power architecture including Event System and SleepWalking, accurate analog features and advanced peripherals.

The devices described here offer Flash sizes from 8 KB to 48 KB in a 32-pin package.

Features

- AVR® CPU:
 - Single-cycle I/O access
 - Two-level interrupt controller
 - Two-cycle hardware multiplier
- Memories:
 - Up to 48 KB In-system self-programmable Flash memory
 - 256B EEPROM
 - Up to 6 KB SRAM
 - Write/Erase endurance:
 - Flash 10,000 cycles
 - EEPROM 100,000 cycles
 - Data retention: 40 Years at 55°C
- System:
 - Power-on Reset (POR) circuit
 - Brown-out Detector (BOD)
 - Clock options:
 - 16/20 MHz low-power internal oscillator
 - 32.768 kHz Ultra Low-Power (ULP) internal oscillator
 - 32.768 kHz external crystal oscillator
 - External clock input
 - Single pin Unified Program Debug Interface (UPDI)
 - Three Sleep modes:
 - Idle with all peripherals running for immediate wake-up
 - Standby
 - Configurable operation of selected peripherals
 - SleepWalking peripherals
 - Power-Down with limited wake-up functionality
- Peripherals:
 - One 16-bit Timer/Counter type A (TCA) with a dedicated period register and three compare channels
 - Three 16-bit Timer/Counter type B with input capture (TCB)

- One 16-bit Real-Time Counter (RTC) running from an external crystal or an internal RC oscillator
- Three USART with fractional baud rate generator, auto-baud, and start-of-frame detection
- Master/slave Serial Peripheral Interface (SPI)
- Dual mode Master/Slave TWI with dual address match
 - Standard mode (Sm, 100 kHz)
 - Fast mode (Fm, 400 kHz)
 - Fast mode plus (Fm+, 1 MHz)
- Event System for CPU independent and predictable inter-peripheral signaling
- Configurable Custom Logic (CCL) with up to four programmable Look-up Tables (LUT)
- One Analog Comparator (AC) with a scalable reference input
- One 10-bit 150 kps Analog-to-Digital Converter (ADC)
- Five selectable internal voltage references: 0.55V, 1.1V, 1.5V, 2.5V, and 4.3V
- CRC code memory scan hardware
 - Optional automatic scan before code execution is allowed
- Watchdog Timer (WDT) with Window mode, with separate on-chip oscillator
- External interrupt on all general purpose pins
- I/O and Packages:
 - 27 programmable I/O lines
 - 32-pin VQFN 5x5 and TQFP 7x7
- Temperature Ranges:
 - Industrial: -40°C to +85°C
 - Extended: -40°C to +125°C
- Speed Grades -40°C to +105°C:
 - 0-5 MHz @ 1.8V – 5.5V
 - 0-10 MHz @ 2.7V – 5.5V
 - 0-20 MHz @ 4.5V – 5.5V
- Speed Grades -40°C to +125°C:
 - 0-8 MHz @ 2.7V - 5.5V
 - 0-16 MHz @ 4.5V - 5.5V

ATmega808/1608/3208/4808 – 32-Pin

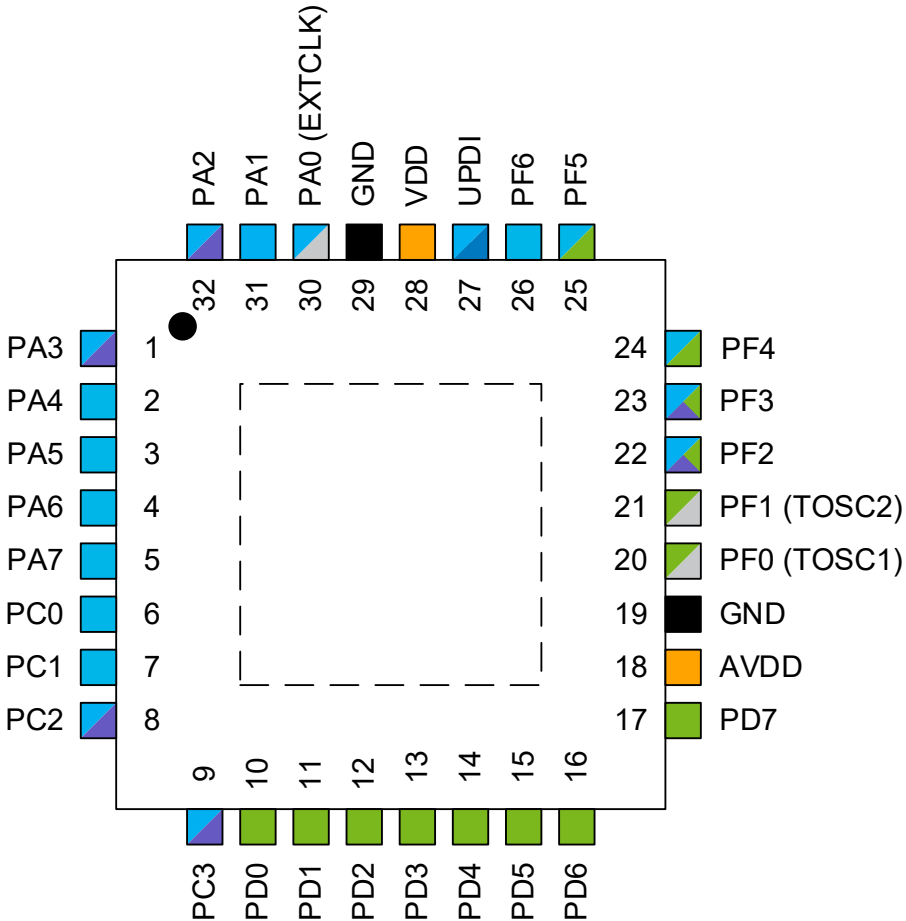

Block Diagram

1. Block Diagram

2. Pinout

2.1 32-Pin VQFN/TQFP

Power

- Input supply
- Ground
- GPIO on VDD power domain
- GPIO on AVDD power domain

Functionality

- ▬ Programming, debug
- ▬ Clock, crystal
- ▴ TWI
- ▣ Digital functions only
- ▣ Analog functions

Note: The center pad underneath the QFN packages can be connected to PCB ground or left electrically unconnected. Solder or glue it to the board to ensure good mechanical stability. If the center pad is not attached, the package might loosen from the board.

Note:

- Pin names are of type Pxn, with x being the PORT instance (A,B,C, ...) and n the pin number. Notation for signals is PORTx_PINn. All pins can be used as event input.
- All pins can be used for external interrupt, where pins Px2 and Px6 of each port have full asynchronous detection.
- Alternate pin positions. For selecting the alternate positions, refer to the PORTMUX documentation.

4. Electrical Characteristics

4.1 Disclaimer

All typical values are measured at $T = 25^{\circ}\text{C}$ and $V_{DD} = 3\text{V}$ unless otherwise specified. All minimum and maximum values are valid across operating temperature and voltage unless otherwise specified.

Typical values given should be considered for design guidance only, and actual part variation around these values is expected.

4.2 Absolute Maximum Ratings

Stresses beyond those listed in this section may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Table 4-1. Absolute Maximum Ratings

Symbol	Description	Conditions	Min.	Max.	Unit
V_{DD}	Power Supply Voltage		-0.5	6	V
I_{VDD}	Current into a V_{DD} pin	$T_A = [-40, 85]^{\circ}\text{C}$	-	200	mA
		$T_A = [85, 125]^{\circ}\text{C}$	-	100	mA
I_{GND}	Current out of a GND pin	$T_A = [-40, 85]^{\circ}\text{C}$	-	200	mA
		$T_A = [85, 125]^{\circ}\text{C}$	-	100	mA
V_{PIN}	Pin voltage with respect to GND		-0.5	$V_{DD} + 0.5$	V
I_{PIN}	I/O pin sink/source current		-40	40	mA
$I_{c1}^{(1)}$	I/O pin injection current except for the RESET pin	$V_{pin} < \text{GND} - 0.6\text{V}$ or $5.5\text{V} < V_{pin} \leq 6.1\text{V}$ $4.9\text{V} < V_{DD} \leq 5.5\text{V}$	-1	1	mA
$I_{c2}^{(1)}$	I/O pin injection current except for the RESET pin	$V_{pin} < \text{GND} - 0.6\text{V}$ or $V_{pin} \leq 5.5\text{V}$ $V_{DD} \leq 4.9\text{V}$	-15	15	mA
T_{storage}	Storage temperature		-65	150	$^{\circ}\text{C}$

Note:

- If V_{PIN} is lower than $\text{GND} - 0.6\text{V}$, then a current limiting resistor is required. The negative DC injection current limiting resistor is calculated as $R = (\text{GND} - 0.6\text{V} - V_{pin}) / I_{Cn}$.
 - If V_{PIN} is greater than $V_{DD} + 0.6\text{V}$, then a current limiting resistor is required. The positive DC injection current limiting resistor is calculated as $R = (V_{pin} - (V_{DD} + 0.6)) / I_{Cn}$.

4.3 General Operating Ratings

The device must operate within the ratings listed in this section in order for all other electrical characteristics and typical characteristics of the device to be valid.

Table 4-2. General Operating Conditions

Symbol	Description	Condition	Min.	Max.	Unit
V_{DD}	Operating Supply Voltage		1.8 ⁽¹⁾	5.5	V
T_A	Operating temperature range		-40	125	$^{\circ}\text{C}$

Note:

1. Operation is ensured down to 1.8V or V_{BOD} with BODLEVEL0, whichever is lower.

Table 4-3. Operating Voltage and Frequency

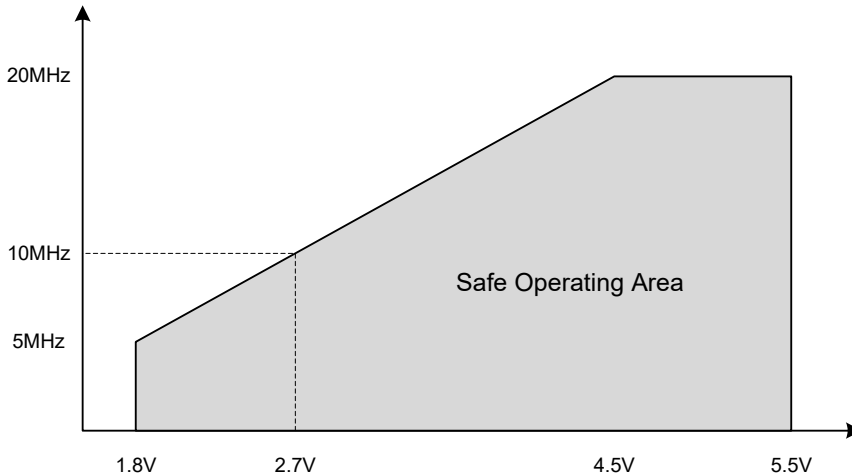

Symbol	Description	Condition	Min.	Max.	Unit
f_{CLK_CPU}	Nominal operating system clock frequency	$V_{DD}=[1.8, 5.5]V$ $T_A=[-40, 105]^{\circ}C^{(1)(4)}$	0	5	MHz
		$V_{DD}=[2.7, 5.5]V$ $T_A=[-40, 105]^{\circ}C^{(2)(4)}$	0	10	
		$V_{DD}=[4.5, 5.5]V$ $T_A=[-40, 105]^{\circ}C^{(3)(4)}$	0	20	
		$V_{DD}=[2.7, 5.5]V$ $T_A=[-40, 125]^{\circ}C^{(2)}$	0	8	
		$V_{DD}=[4.5, 5.5]V$ $T_A=[-40, 125]^{\circ}C^{(2)}$	0	16	

Note:

1. Operation is ensured down to BOD triggering level, V_{BOD} with BODLEVEL0.
2. Operation is ensured down to BOD triggering level, V_{BOD} with BODLEVEL2.
3. Operation is ensured down to BOD triggering level, V_{BOD} with BODLEVEL7.
4. These specifications do not apply to automotive range parts (-VAO).

The maximum CPU clock frequency depends on V_{DD} . As shown in the figure below, the maximum frequency vs. V_{DD} is linear between $1.8V < V_{DD} < 2.7V$ and $2.7V < V_{DD} < 4.5V$.

Figure 4-1. Maximum Frequency vs. V_{DD} for $[-40, 105]^{\circ}C$

4.4 Power Considerations

The average die junction temperature, T_J (in $^{\circ}C$) is given from the formula:

$$T_J = T_A + P_D \cdot R_{\theta JA}$$

where P_D is the total power dissipation.

The total thermal resistance of a package ($R_{\theta JA}$) can be separated into two components, $R_{\theta JC}$ and $R_{\theta CA}$, representing the barrier to heat flow from the semiconductor junction to the package (case) surface ($R_{\theta JC}$) and from the case to the outside ambient air ($R_{\theta CA}$). These terms are related by the equation:

$$R_{\theta JA} = R_{\theta JC} + R_{\theta CA}$$

$R_{\theta JC}$ is device related and cannot be influenced by the user. However, $R_{\theta CA}$ is user-dependent and can be minimized by thermal management techniques such as heat sinks, ambient air cooling, and thermal convection. Thus, good thermal management on the part of the user can significantly reduce $R_{\theta CA}$ so that $R_{\theta JA}$ approximately equals $R_{\theta JC}$.

The power dissipation curve is negatively sloped as ambient temperature increase. The maximum power dissipation is, therefore, at minimum ambient temperature while the highest junction temperature occurs at the maximum ambient temperature.

Table 4-4. Power Dissipation and Junction Temperature vs Temperature

Package	T_A Range	$R_{\theta JA}$ ($^{\circ}\text{C}/\text{W}$)	P_D (W) Typical	$T_J - T_A$ ($^{\circ}\text{C}$) Typical
VQFN32	-40 $^{\circ}\text{C}$ to 125 $^{\circ}\text{C}$		1.0	
TQFP32	-40 $^{\circ}\text{C}$ to 125 $^{\circ}\text{C}$		1.0	

4.5 Power Consumption

The values are measured power consumption under the following conditions, except where noted:

- $V_{DD}=3\text{V}$
- $T_A=25^{\circ}\text{C}$
- OSC20M used as system clock source, except where otherwise specified
- System power consumption measured with peripherals disabled and I/O ports driven low with inputs disabled

Table 4-5. Power Consumption in Active and Idle Mode

Mode	Description	Condition		Typ. 25°C	Max. 85°C ⁽¹⁾	Max. 125°C	Unit
Standby	Standby power consumption	RTC running at 1.024 kHz from external XOSC32K (CL=7.5 pF)	V _{DD} =3V	0.7	-	-	μA
		RTC running at 1.024 kHz from internal OSCULP32K	V _{DD} =3V	0.7	6.0	16.0	μA
Power-Down/ Standby	Power-down/Standby power consumption are the same when all peripherals are stopped	All peripherals stopped	V _{DD} =3V	0.1	5.0	15.0	μA
Reset	Reset power consumption	RESET line pulled low	V _{DD} =3V	100	-	-	μA

Note:

1. These parameters are for design guidance only and are not tested.

4.6 Peripherals Power Consumption

The table below can be used to calculate the additional current consumption for the different I/O peripherals in the various operating modes.

Some peripherals will request the clock to be enabled when operating in STANDBY. See the peripheral chapter for further information.

Operating conditions:

- V_{DD}=3V
- T=25°C
- OSC20M at 1 MHz used as system clock source, except where otherwise specified
- In Idle Sleep mode, except where otherwise specified

Table 4-7. Peripherals Power Consumption

Peripheral	Conditions	Typ. ⁽¹⁾	Unit
BOD	Continuous	19	μA
	Sampling @ 1 kHz	1.2	
TCA	16-bit count @ 1 MHz	13.0	μA

To order or obtain information, for example on pricing or delivery, refer to the factory or the listed sales office.

Note: Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes. Check with your Microchip Sales Office for package availability with the Tape and Reel option.

7. Online Package Drawings

For the most recent package drawings:

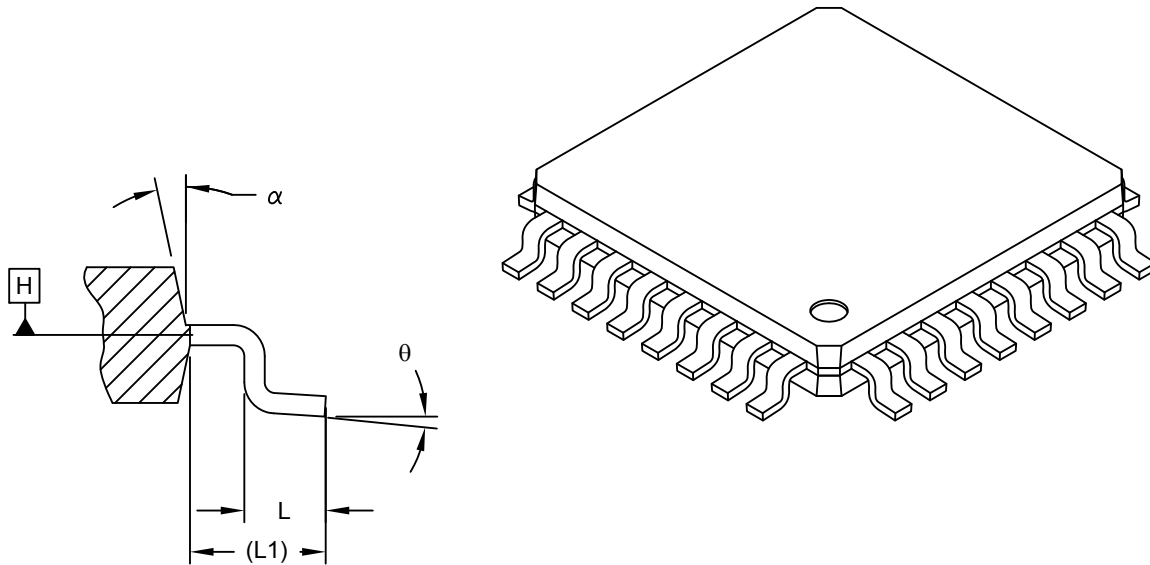

1. Go to <http://www.microchip.com/packaging>.
2. Go to the package type specific page, for example VQFN.
3. Search for either Drawing Number or Style to find the most recent package drawings.

The Microchip Website

Microchip provides online support via our website at <http://www.microchip.com/>. This website is used to make files and information easily available to customers. Some of the content available includes:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Product Change Notification Service

Microchip's product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to <http://www.microchip.com/pcn> and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

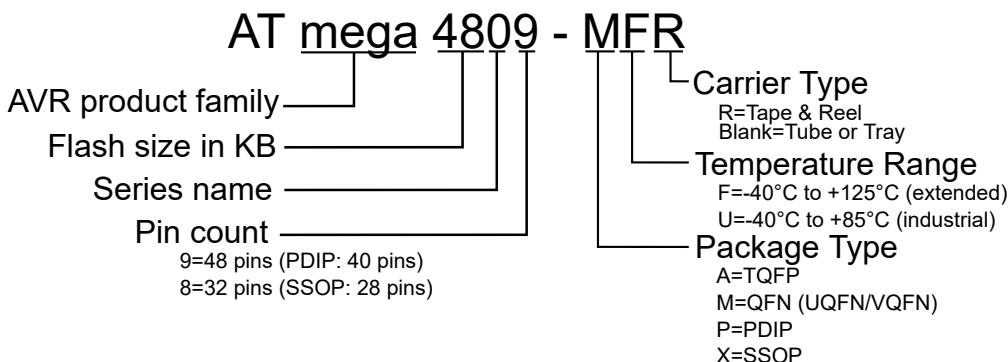

- Distributor or Representative
- Local Sales Office
- Embedded Solutions Engineer (ESE)
- Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the website at: <http://www.microchip.com/support>

Product Identification System

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

Note: Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes. Check with your Microchip Sales Office for package availability with the Tape and Reel option.

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
