17 pins in M12

High-position M12 design

Circular connectors have established themselves as the standard in field cabling. Phoenix Contact continues to develop this standard and opens up completely new fields of application for the high-position M12 connector.

Shielded or unshielded sensor/actuator cables, flush-type connectors with solder connection or punched on litz wires are part of the range. The new pre-assembled connectors with PIERCECON connection method are the ideal solution for easy connection on site.

The integrated SPEEDCON rapid interlock system reduces the connection time by up to 90%.
